$$= 10800$$

$$\begin{aligned}
 (ii) \quad & (137 \times 42) - (37 \times 42) \\
 & (137 \times 42) - (37 \times 42) \\
 & = (42 \times 137) - (42 \times 37) \\
 & = 42 \times (137 - 37) \\
 & = 42 \times 100 \\
 & = 4200
 \end{aligned}$$

Workout the following;

1. $(2 \times 17) + (2 \times 13)$
2. $(75 \times 29) - (75 \times 19)$
3. $(129 \times 37) - (129 \times 27)$
4. $(290 \div 70) - (10 \div 70)$
5. $(179 \div 13) - (10 \div 13)$

ASSOCIATIVE PROPERTY

Example

The alteration of the position of the brackets does not change the result.

Use the associative property to workout

$$(5+8)+2 = 5+(8+2) = (5+2)+8$$

$$13+2 = 5+10 = 7+8$$

$$15 = 15 = 15$$

The alteration of the position of the brackets does not change the result.

$$(5 \times 8) \times 2 = 5 \times (8 \times 2) = (5 \times 2) + 8$$

$$40 \times 2 = 5 \times 16 = 10 \times 8$$

$$80 = 80 = 80$$

Conclusion : Associative property works with both addition and multiplication only.

COMMUTATIVE PROPERTY

Example

$$4+3 = 3+4 \quad (\text{What you start with does not affect the result})$$

$$\underline{\underline{7}} \quad 7$$

$$4 \times 3 = 3 \times 4 \quad (\text{What you start with does not affect the result})$$

$$\underline{\underline{12}} = 12$$

Conclusion: Commutative property works with both addition and multiplication

PATTERNS AND SEQUENCES

SUB TOPIC: DIVISIBILITY TESTS

Test for 2.

A Number is divisible by 2 if the digit in the one's place is 0, 2, 4, 6, or 8 eg 1460

Test for 3:

A number is divisible by 3 if the sum of its digits is divisible by 3 eg $741 = 7 + 4 + 1 = 12$

Test for 4:

A number is divisible by 4 if the number formed by its last two digits is divisible by 4. eg 572. The last two digits are 7 and 2 therefore the number formed is 72 which is divisible by 4. Hence 572 is divisible by 4.

Test for 5

A number is divisible by 5 if the last digit in the ones place is either 0 or 5. eg 360 or 805.

Activity

1. Write any two numbers divisible by 2
2. Which of the numbers is divisible by 3
34 236 11190 2783
3. Which of the numbers is divisible by 4
4612 139 8500 7869

Test for 6:

A number is divisible by 6 if it is divisible by 2 and 3. In other words a number is divisible by 6 if it is even and the sum of its digits is divisible by 3.

Example:

618 is divisible by 6 since it is an even number and the sum of its digits $6 + 1 + 8 = 15$ is divisible by 3.

738 is divisible by 6 since it is an even number and the sum of its digits $7 + 3 + 8 = 18$ is divisible by 3. Therefore 738 is divisible by 6.

Test for 7:

When the last digit of a number is doubled and the result is subtracted from the number formed by the remaining digits, the outcome is divisible by 7.

Example: Take the number 861. the last digit is 1 and the number formed by the remaining digits is 86, double 1 to give $(1+1)=2$

Subtract 2 from 86 to give $(86 - 2) = 84$

84 is divisible by 7. Hence 861 is also divisible by 7.

Test for 8:

A number is divisible by 8 if the number formed by the last three digits is divisible by 8.

Example:

In the number 7960,760 is number formed by the last three digits. It is divisible by 8 therefore 7960 is divisible by 8.

Test for 9:

A numbers is divisible by 9 if the sum of its digits is divisible by 9.

Example: 198 the sum of 198 is $1+9+8 = 18$

18 is divisible by 9 therefore 198 is divisible by 9.

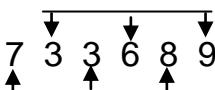

Test for 10:

A number is divisible by 10 if the digit in the ones place is 0 eg 70, 60, 120, 3010.

A number which is divisible by 10 is also divisible by 2 and 5.

Test for 11:

A number is divisible by 11 if the difference between the sum of the digits in even places and the sum of the digits in the odd place is zero (0) or divisible by 11.

eg Even position: 

Odd position

Sum of the numbers in odd positions = $7 + 3 + 8 = 18$
 Sum of the numbers in even positions = $3 + 6 + 9 = 18$
 Difference between sums = $18 - 18 = 0$
 Since difference is divisible by 11
 ∴ the number 676390 is divisible by 11.

SUB TOPIC: PICTO GRAPHS(review)

Definition:

A picto graph is where we use pictures to represent quantities of actual items.

Example:

The graph below shows the number of balls that were given to different schools.

Upper P/s	
Rukondo P/S	
Lower P/s	
Star Parents' P/s	
Rukungiri P/s	

Given that  stands for 80 balls.

- (a) How many more balls did Rukungiri p/s get than Rukondo p/s?

$$5 - 1 = 4 \text{ pictures}$$

$$4 \times 80$$

$$\underline{\underline{320 \text{ more balls}}}$$

- (b) Which schools had the same number of balls?

Star Parents' Primary School and Upper Primary School

- (c) Find the total number of balls that were given out to the five schools.

$$16\frac{1}{2} \times 80$$

$$\frac{33}{2} \times 80$$

$$33 \times 40$$

$$\underline{\underline{1320 \text{ balls}}}$$

Mathematics is the key

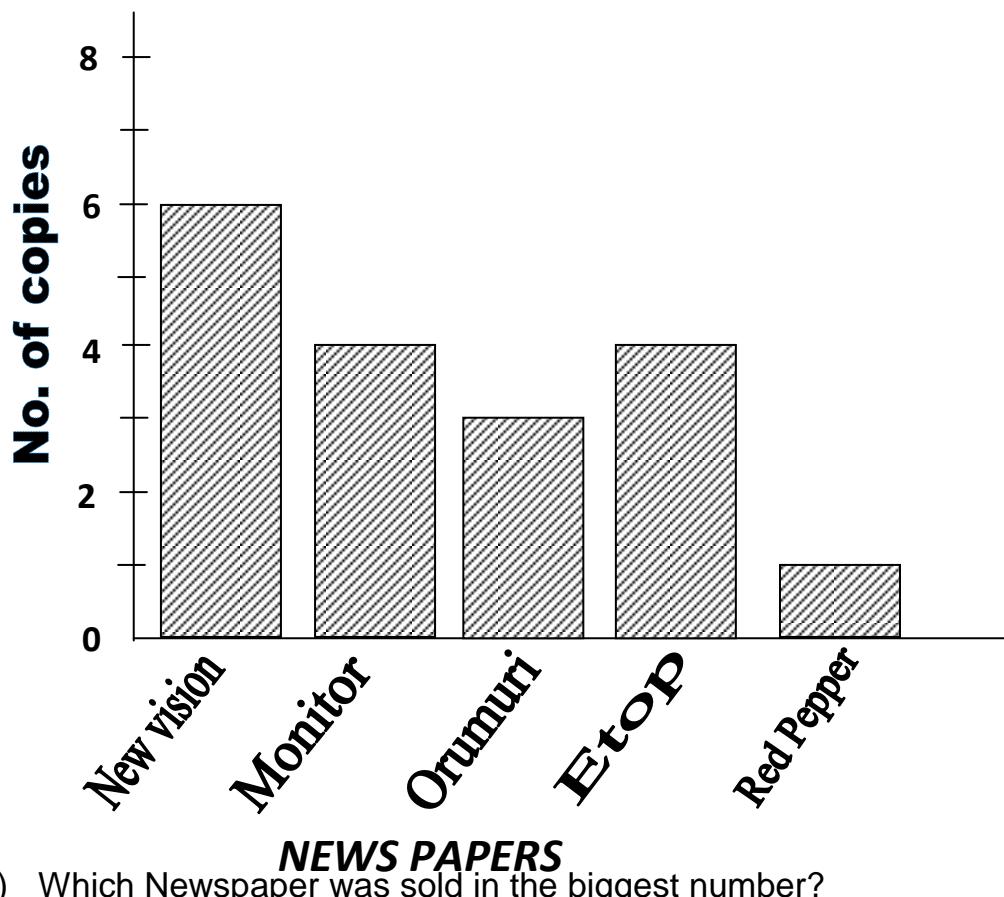

- (d) Calculate the average number of books that were distributed to the five schools.

$$\begin{aligned} \text{Average} &= \frac{\text{sum of items}}{\text{number of items}} \\ &= \frac{1320}{5} \\ &= 265 \text{ balls} \end{aligned}$$

Let the wrong answers be m

Correct answers = $30 - m$

$$4(30 - m) - (m \times 1) = 60$$

$$120 - 4m - m = 60$$

$$120 - 5m = 60$$
